Title:Long-term growth, mortality and regeneration of trees in permanent vegetation plots in the Pacific Northwest, 1910 to present

Abstract:

A network of more than 130 permanent vegetation plots provides long-term information on patterns and rates of forest succession in most of the major forest zones of the Pacific Northwest. The plot network extends from the coast to the Cascades in western Oregon and Washington and east to ponderosa pine forests in the Oregon Cascades. Most of the permanent plots were established during two intervals: from 1910 to 1948, and from 1970 to 1989. The earlier plots were established by U.S. Forest Service researchers to quantify timber growth in young stands of important commercial species and to help answer other applied forestry questions. The more recent period of plot establishment began under the Coniferous Forest Biome program of the International Biological Program during the 1970s, and continued under the Long-term Ecological Research program. A broader set of objectives motivated plot establishment since 1970, especially quantification of composition, structure, and population and ecosystem dynamics of natural forests. Plots have one of three spatial arrangements: (1) contiguous rectangles subjectively placed within an area of homogeneous forest; (2) circular plots subjectively placed within an area of homogeneous forest; and (3) circular plots systematically located on long transects to sample an entire watershed, ridge, or reserve. Rectangular study areas are mostly 1.0 ha or 0.4 ha (1.0 ac) in size (slope-corrected). Circular plots are 0.1 ha (0.247 ac), not corrected for slope. The tree stratum is the focus of work in closed-forest study areas. All trees larger than a minimum diameter (5 cm for most areas) are permanently tagged. Plots are censused every 5 or 6 years. Attributes measured or assessed at each census include tree diameter, tree vigor, and the condition of the crown and stem. The same attributes are recorded for trees (ingrowth) that have exceeded the minimum diameter since the previous census. In many plots tree locations are surveyed to provide a plot-specific x-y location. A mortality assessment is done for trees that have died since the previous census. The assessment characterizes rooting, stem, and crown condition, obvious signs of distress or disturbance, and the apparent predisposing and proximate causes of tree death.

Managing agency

MONTH

Month

MORT_CAUSE1

Proximate mortality cause: the immediate cause that precipitates tree death (defined as primary mortality cause before 2010)

MORT_CAUSE2

Predisposing mortality cause: any condition that produces a susceptibility or disposition to tree death without actually causing it (defined as secondary or contributing mortality cause before 2010)

MORT NOTES

Mortality check comments added to clarify observations and decisions (for example, note the name of the pathogen if known)

MOSS_DOM

Dominant mosses, year of evaluation, and comments

NEXTMORT

Next mortality check

NEXTREM

Next remeasurement year

NPP

Net primary bole production

PCTMORTPERYR

Percent annual mortality

PDOP

Position, dilution and precision

PLOT_NR

Plot number

PLOTNUMBER

Plot number within STANDID

POSITION

Tree position (used prior to 2010); describes the physical position of the tree; POSITION is replaced with two separate measurements of MAIN_STEM and ROOTING beginning 2010

PSP_STUDYID

Permanent Study Plots (PSP) study identification code - a mutually exclusive grouping of study forest stands

QREF_CODE

Quad reference code

QUAD_MAP

Name of quad map

QUARTER

Quarter subplot number for circular plots - zero is assigned when quarter is not used or not applicable

REF_POINT

Reference point

REL BA

Relative basal area

REL_BIOMASS
Relative biomass
REL_DENSITY
Relative density
REL_VOLUME
Relative bole wood volume
RNGR_DIST
Ranger district
ROOT
Rooting medium
ROOTING
Tree rooting condition code (use of this code begins in 2010)
SAMPLEDATE
Date of remeasurement (day of month was not always tracked; in these cases the 1st of each month is assigned)
SEASON
Season of remeasurement
SEC16TH
Direction of 1/16th section
SEC4TH
Direction of quarter section
SEC64TH
Direction of 1/64th section
SERAL
Seral stage
SHRUB_DOM
Dominant shrubs, year of evaluation, and comments
SIGSTR
Satellite signal level
SLOPE
Slope of plot
SLOPEDIST
Horizontal distance from measuring point to tree
SOILS
Soil information
SPECIES
Tree species code (Taxonomic reference: Garrison and Skovlin 1976)
ST_SLOPE

Overall slope of stand
STANDID
Study forest stand or watershed identification code
START_DATE
Starting date
STATE
State
STEM_MAP
Presence of stem map (y/n)
STEMCOUNT
Count of stems in class
STND_SHAPE
Plot shapes
SUPPORT_PCT
Percent of the down portion of the tree bole that is suppored above the ground (by its own branches, other trees or downed logs, or other objects such as rocks). Only applies to MAIN_STEM code= 1,2 or POSITION code=2,4
TAG
Current tree tag number
ТОРО
Stand topography information
TRANSECT
Transect number
TREE_PCT
Percent of the entire main stem length that is intact (does not apply to uprooted trees); record for living trees begins in 2010 (Entity 2) - only recorded when mortality is noted before 2010 (Entity 3).
TREE_STATUS
Tree status code
TREE_VIGOR
Overall vigor code
TREEID
Tree identification code represented as STANDID+PLOTID+00000, where 00000 represents a unique tree number for that stand and plot
UNDERSTORY
Presence of understory data (y/n)
UTM_DATUM
Utm datum
VEG_TYPE
Dominant vegetation
